

Cyberstorage:

Leverage SAN Capacity for High Performance Secure NAS

Including 3PAR, Alletra, Nimble, Primera, and XP

Secure NAS – SAN Gateway

Many organizations have a need for Network Attached Storage (NAS) since 80-90% of the world's data is unstructured. Leverage any HPE enterprise SAN with BrickStor SP to create high performance, and highly available Cyberstorage. Cyberstorage actively defends unstructured data against sophisticated attacks including insider threats and ransomware. BrickStor SP is a scalable solution that can stop an attack in real time and makes it easy for any organization to comply with new data-centric zero trust requirements.

Convert SAN capacity to NAS capacity with the full features set of BrickStor SP

- SMB 2/3 and NFS 3/4/4.1/4.2
- Inline compression and deduplication
- RAM cache for performance acceleration
- Space efficient snapshots with file indexing
- AES-256 encryption for data at rest and in flight
- Integrated compliance reporting
- Ransomware and insider threat protection
- User behavior auditing and analysis

Economical and Easy to Install and Manage

BrickStor SP SAN Gateway can be installed and configured in most environments in under an hour. Licensed based on usable capacity, it's an economical solution that adds critical data security features to any environment without sacrificing performance.
